

MicroMentor.

A LEARNING APP FOR STUDENTS

**Turn a whole lecture into 3 minute lessons
you actually remember.**

Beats cramming and the forgetting curve. Built on the AMPLIFY model.

PRESENTED BY

- **Aisyatun Nabiha binti Mohamed Husain** 25004128

- [Group member 3] [matric]

THE PROBLEM

We cram. Then we forget.

- Lectures dump everything at once. Working memory overloads.
- Without review, we forget most of it within days (Ebbinghaus, 1885).
- So we cram. High stress, and it fades right after.

50-80% forgotten within days

Why this matters to us

Personal

We have all crammed and forgotten it a week later.

Scale

Thousands of UM students, heavy content, one phone.

Proven

Backed by cognitive science and the AMPLIFY model.

How students learn, then and now

THEN

Textbooks, printed notes, long PDFs. Passive, and quickly forgotten.

NOW

Apps like Duolingo and Anki. Short and spaced, but generic.

The gap: none are tied to your own lectures. MicroMentor is.

OUR SOLUTION

MicroMentor turns your **lecture notes** into short, personalised lessons, with quizzes and spaced reminders so it **sticks**.

- 3 to 5 min lessons. One idea at a time, on your phone.
- Smart review. Reminds you right before you would forget.
- Learn together. A class leaderboard and a Q and A wall.

AMPLIFY, applied to MicroMentor

AMPLIFY is a microlearning model by Nurul Fitriah Alias (UM, 2024). Seven components, seven design decisions.

- | | | |
|---|--|---------------------------------------|
| 1 | Clear learning objectives | One goal per lesson. |
| 2 | Personalised content | Adapts to your course and weak spots. |
| 3 | Continuous feedback | Instant answers, spaced reminders. |
| 4 | Efficient content delivery | 3 to 5 minutes, mobile, offline. |
| 5 | Interactive experiences | Tap, drag, scenario questions. |
| 6 | Social interaction | Class leaderboard and Q and A wall. |
| 7 | Seamless curriculum integration | Mapped to your syllabus. |

Aina's story in six frames

1 The problem

Aina faces 120 slides the night before her exam. Panic.

2 Discovery

She opens MicroMentor. Do three short lessons today.

3 Learning

A three minute lesson, one clear goal, tap to answer.

4 Feedback

Instant tick and a reason. A reminder brings it back tomorrow.

5 Together

She checks the class leaderboard and asks on the wall.

6 Outcome

Exam week. She feels calm, confident, and remembers.

The clickable prototype

Seven screens built in Figma. Home · Lesson · Feedback · Leaderboard · Syllabus shown.

We tested with peers, then changed four things

WHAT USERS SAID

Feedback did not say why an answer was wrong.

Making a lesson took too many steps.

The leaderboard felt stressful for some.

People wanted a language choice.

WHAT WE CHANGED

Added a one line explanation to every result.

Cut the flow from six steps to three.

Made it opt in and class only.

Added a Bahasa Melayu and English toggle.

Timeline, sustainability and commercialisation

Sustainability

Free tools only, like Figma and Canva. No cost to the course. Going digital means no printed notes.

Commercialisation

Freemium. Free basics, a low fee for premium. Sell ready made lesson packs. Bilingual in BM and English.

Creativity extras

Bilingual with audio, an offline mode, and gentle analytics that coach rather than rank.

Where it is heading

- AI turns any PDF of notes into lessons in minutes.
- Lives inside WhatsApp and Teams.
- Badges that follow you between courses.

Creativity works best when it is aimed at a real problem and structured by a sound model.

Terima kasih.
